Always Wear a Life Jacket!
A life jacket is the most important piece of safety equipment a paddler can have, but it cannot work if it is not worn. Be ready for unexpected circumstances and always wear a life jacket when on or near the water! More safety information is available at HudsonRiverGreenwayWaterTrail.org or WearItNewYork.com.

Hudson River Estuary Paddling
Conditions on the Hudson south of Troy can vary greatly, ranging from calm water to extremely rough conditions which are impossible to navigate. Poor conditions caused by strong tidal currents, wind, or severe weather can worsen suddenly and without warning. Kayaks designed for sea conditions are recommended and paddlers should carry all appropriate safety gear. Kayaks and canoes are very difficult for other mariners to see and it is the paddler's responsibility to remain alert for power-boats and other watercraft. Ocean-going ships and tugboats with barges navigate a winding shipping channel marked by red and green buoys. Avoid the channel, or cross it at right angles if necessary. See www.uscgboating.org or www.WearItNewYork.com for safety information and HudsonRiverGreenwayWaterTrail.org for tide and current information.

Monitoring Stations
Three entities maintain monitoring stations along the Hudson with near-real time data of use to paddlers, including salt front, water and air temperature, tide height, streamflow, precipitation amounts, and wind direction and speed — the U.S. Geological Survey (<http://onoi.doi.gov/IIIEIqpf>), the Hudson River Environmental Conditions Observing System (www.hrecos.org/), and the Beacon Institute's REON system (<http://bit.ly/1g54eCt>).

CAUTIONARY STATEMENT FOR ALL PADDLERS
Paddlers should make themselves aware of the potential dangers related to paddling the Hudson River. Although marshes and tributary streams along the Hudson River are attractive destinations, and some are accessible with no barriers to navigation, paddlers should be aware that other sites are not easily accessible due to bridges, dams, and underwater obstructions. Bridge heights above water vary with the tides. Some underwater obstructions just beneath the water's surface may not be visible. These obstructions can cause a boat to flip at the wrong tide level, but be perfectly safe to paddle over or around at higher or lower levels. Paddlers are advised and encouraged to review *The Hudson River Water Trail Guide* and an official NOAA chart for ANY known locations of these obstructions. Also, paddling in the spring and fall is lovely, but one of the lesser-known dangers of paddling during colder weather is the possibility of cold water immersion leading to hypothermia. Be sure to read and follow all safety suggestions — your survival may depend on it. Paddlers who educate themselves regarding safety precautions and potential dangers reduce the risk of injury or death. *This map series is intended for planning purposes only; not for navigational use. The U.S. Coast Guard monitors channel 16 on VHF Marine radios. This channel is for emergency use only.*
